

design for **all**[®]

Comfort, Safety, Sustainability:

Comfort, safety and sustainability are probably not the first terms that come to mind regarding inclusive, barrier-free environments. And yet they are central to our philosophy and objectives at **design for all**.

Inclusive environments create a high quality of life, they are a benefit for all people and they have considerable positive impact on the economy: cost savings for the health and social security system as well as new markets for trade and industry.

design for all, Centre for Inclusive Environments

Making “design for all” a normal part of life.

An inclusive environment where everyone can move and act easily and independently; products, which are easy to use; technology that makes life easier for everyone – this is design for all, and these are opportunities for the future.

design for all brings together various fields of competence spanning architecture, design and technology. We have extensive national and international experience in the design and implementation of inclusive environments, products and information.

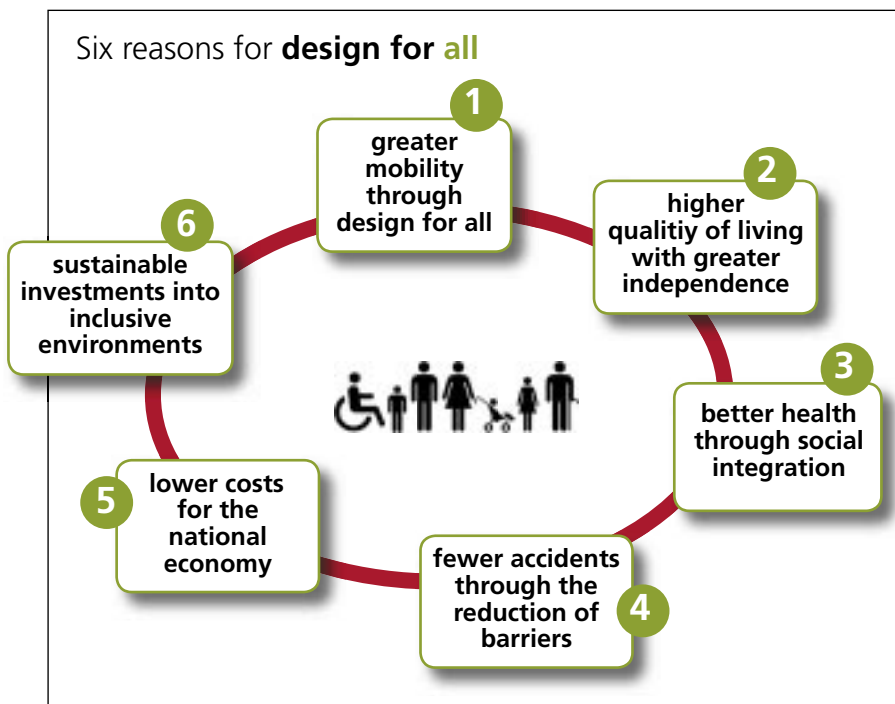

Together with **design for all** efficient and sustainable solutions for all people can be achieved, be it in public environments, on the high street, in tourism or in care services.

What **design for all** has to offer

The interdisciplinary team of **design for all** offers integrated consultancy services, far beyond the requirements for “bricks and mortar”.

Some of our services are:

- building consultancy
- build project support from planning to implementation
- orientation systems and colour design
- environmental controls
- Telecare solutions
- product and information design
- training for employees, tradesmen, architects, planners and designers
- communication and information
